Hey I'm Mac, I designed the SoSimple Texture pack (as you can see, you're inside it now). I thought of the idea of SoSimple while using a big Texture Pack (like 128x128 I think), I was pretty much sick of the detail, I thought "My gosh! If I want detail I can just go outside ... I want Simplicity!!!" and then I started looking up info on how to make texture packs and downloaded about 10 TPs (that were up to date) for reference and got to work on [very slowly] designing SoSimple.

Extra Info:

I'm a traceur (Free-Runner)! I'm MLG for Halo:Reach Swat and CoD:MW2 (Xbox 360)! I run 3 websites! I'm learning

Java Script! I love making .gif images! I enjoy frozen yogurt (yoyogurt being my favorite provider)! I enojoy

Chik-fil-a and McDonalds food! I LOVE making charts (whether they are relevant or not)! I love using emoticons when appropriate ;D ! I love having 2 monitors!

II – What it does

SoSimple is a texture pack designed to transform your Minecraft to something more simple, with very small (16x16) designs for blocks, everything is easy to tell apart ... Finally!

III – Problem Reports

Did you have a problem installing SoSimple? I'm sorry :(Place the below information as a comment on the Texture Pack's Planet Minecraft Page (can be found here: <http://goo.gl/S9B0f>) and I'll help you out :)

Installation Process Used: (Auto Installer or Manual Installation)

Unzipper Thing Used: (7-Zip, WinRar, etc.)

Explanation of how you installed it: (e.g. I downloaded it then placed it in my texturepack folder in .minecraft from my downloads)

What Went Wrong?: (e.g. Black Screen, NOTHING ((It was just the default pack)), etc.)

Something other than something like that may be ignored.
